Introduction

This project simulates the design of a **Software as a Service (SaaS) platform** aimed at small and medium-sized businesses operating in the cafe and barbershop (catering and beauty) sectors. The purpose of the system is to provide a unified digital solution that simplifies daily business operations, improves efficiency, and ensures a seamless customer experience.

The platform focuses on **business-side functionality**, where employees are the main users of the system. Customers interact only indirectly by providing booking information and making payments. By offering modular features, the system can adapt to the specific needs of both catering and beauty service providers, ensuring flexibility for different subscription plans.

Key goals of the system include:

- **Order management** – creation, modification, payment processing (cash, card, gift card), discounts, tips, and receipt generation.
- **Reservation management** – scheduling, modifying, and canceling appointments.
- **System management** – handling taxes, service charges, user management, inventory, and product/service configuration.
- **Security and authorization** – ensuring that only authorized employees can perform business operations.

By combining functionalities of both sectors into a single SaaS solution, the system helps businesses streamline operations, reduce manual effort, and provide professional and transparent service to their customers.

Business flows

User/business management

Business flow:

- SuperAdmin (IT Support) adds business owners to the system and all their data.
- SuperAdmin can modify the entire system.
- After business owners are added, each business owner adds location, contact info (phone, email), name and other relevant details.
- Each business owner adds employees (their services, all their data). Can modify all employees and orders, menu in their business.
- After employees are added, the employee tries to log in to the system.
- If the employee is registered in the system, he can login.
- If not, the business owner registers an employee in the system.
- Logged in employee gets a reservation from the client, creates an order.
- If an employee wants to cancel the reservation, then reservation is canceled and time is freed up in the system.
- Employee can modify the reservation (services, visit time).
- Client arrives and the employee does his job.
- Employee can apply discount to the order, after providing the service.
- Employee receives the payment (cash, card, gift card)
- Employee confirms payment and closes order

Tables/entities:

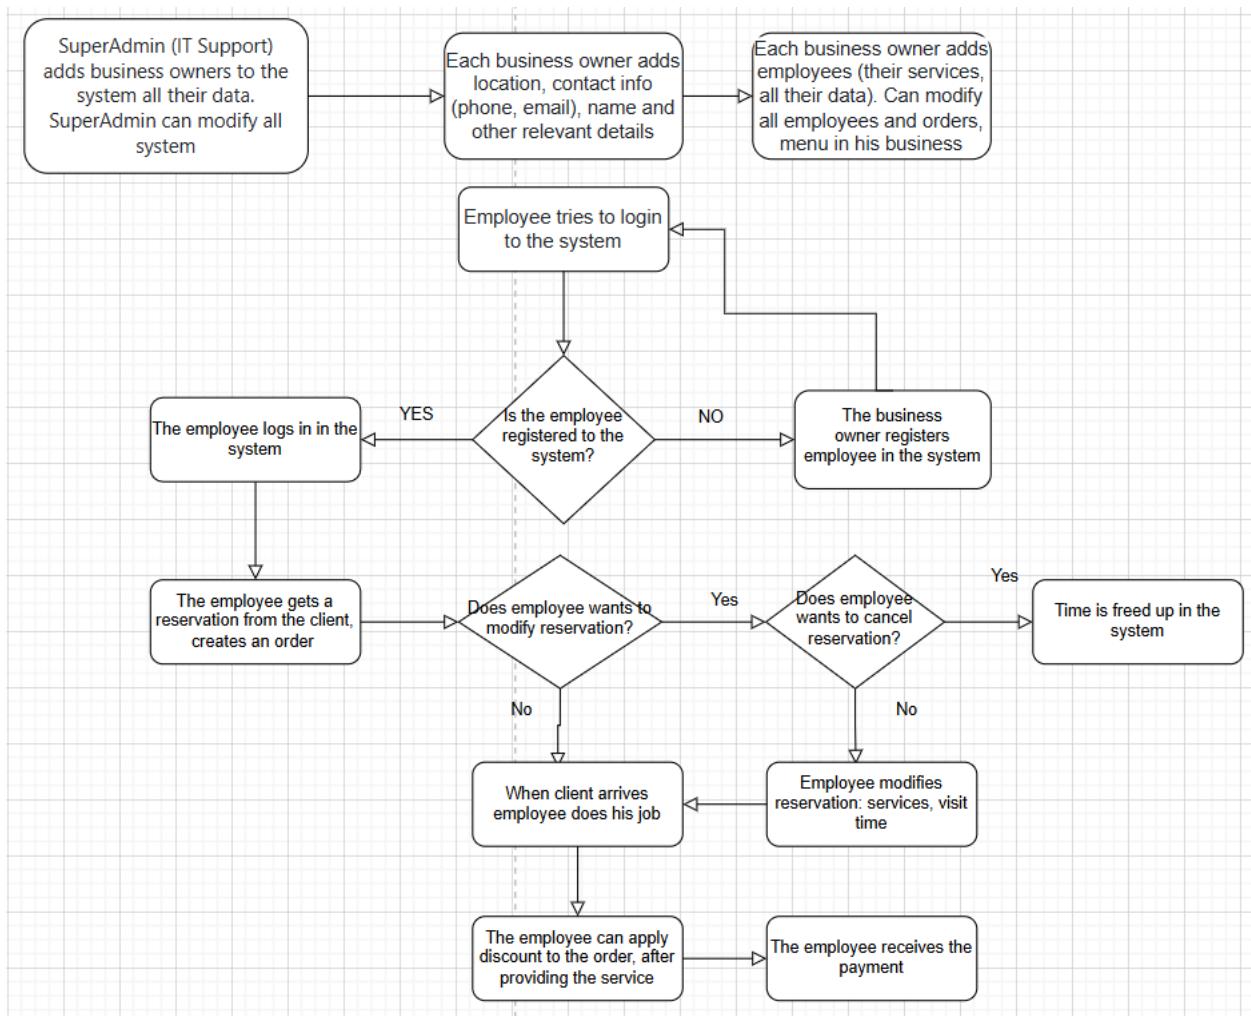

- Business (multiple catering or beauty establishments)
- User
- Service (hair cutting, hair coloring, hairstyle, beard shaving, catering,)
- Reservation
- Payment (cash, card, gift card, tips)
- Receipt
- Discount
- Tax

Components:

- Employee management (Business, User)
- Business management (Service, Reservation, Payment, Receipt, Discount, Tax)

Actions:

- SuperAdmin (IT Support) adds business managers
- Business managers add employees
- Employee creates an order
- Employee does his job
- Employee applies a discount
- Employee receives payment for the service
- Employee confirms payment and closes order

Order management

Business flow:

- Client arrives at the catering establishment;
- Employee greets client;
- Client browses the menu and places an order (drink/food);
- If an item is unavailable, employee notifies client and suggests alternatives;
- Client makes final order decisions;
- Employee enters the order into the POS (Point of Sale) system;
- Employee applies a discount if applicable;
- Client pays for the order (by cash, card, gift card, may leave tips);
- Employee confirms payment, prints the receipt and closes the order;
- Employee hands the receipt to the client;
- Employee prepares the order;
- Employee asks the client whether the order is dine-in or takeout;
- If order is dine-in, order is served to the client at the table;
- If order is for takeout, order is handed to the client at the counter;
- Client consumes drink and/or food;
- Client leaves the catering establishment;
- Employee clears the table.

Tables/entities:

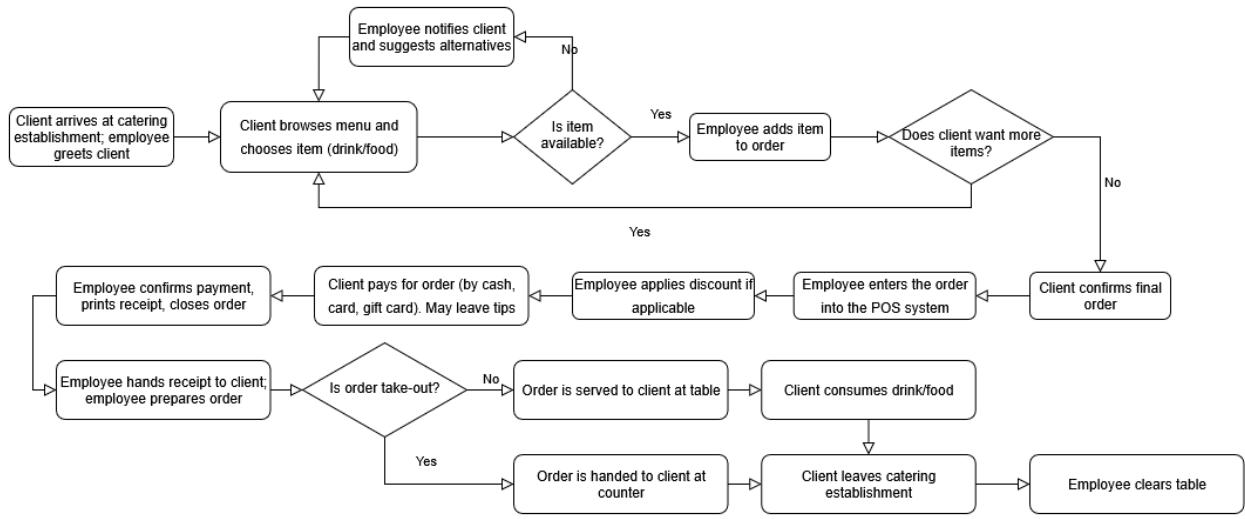

- Product (drink/food)
- Order_Item
- Order
- Payment (cash, card, gift card, discount, tips)
- Receipt
- Discount
- Tax

Components:

- Order management (Product, Order_Item, Order, Payment, Receipt, Discount, Tax)

Actions:

- Client places an order
- Client pays for the order
- Employee applies a discount
- Employee confirms payment, prints and hands receipt
- Employee closes the order

Reservation management

Business flow:

- Client selects what he needs: catering or beauty establishments.
- For example, he chooses beauty establishments.
- Client selects what services he needs from the beauty establishments.
- The system shows all available beauty establishments that provide these services.
- Client selects the beauty establishments he wants.
- Client reserves free time at the beauty establishment.
- Client can modify reservation (services, visit time).
- If the client cancels the reservation, then time is freed up in the system.
- Client arrives at the beauty establishment.
- Client identifies himself as the one who made the reservation.
- Beauty establishment specialist does his job.
- Client makes payment (cash, card, gift card, may leave tips).

Tables/entities:

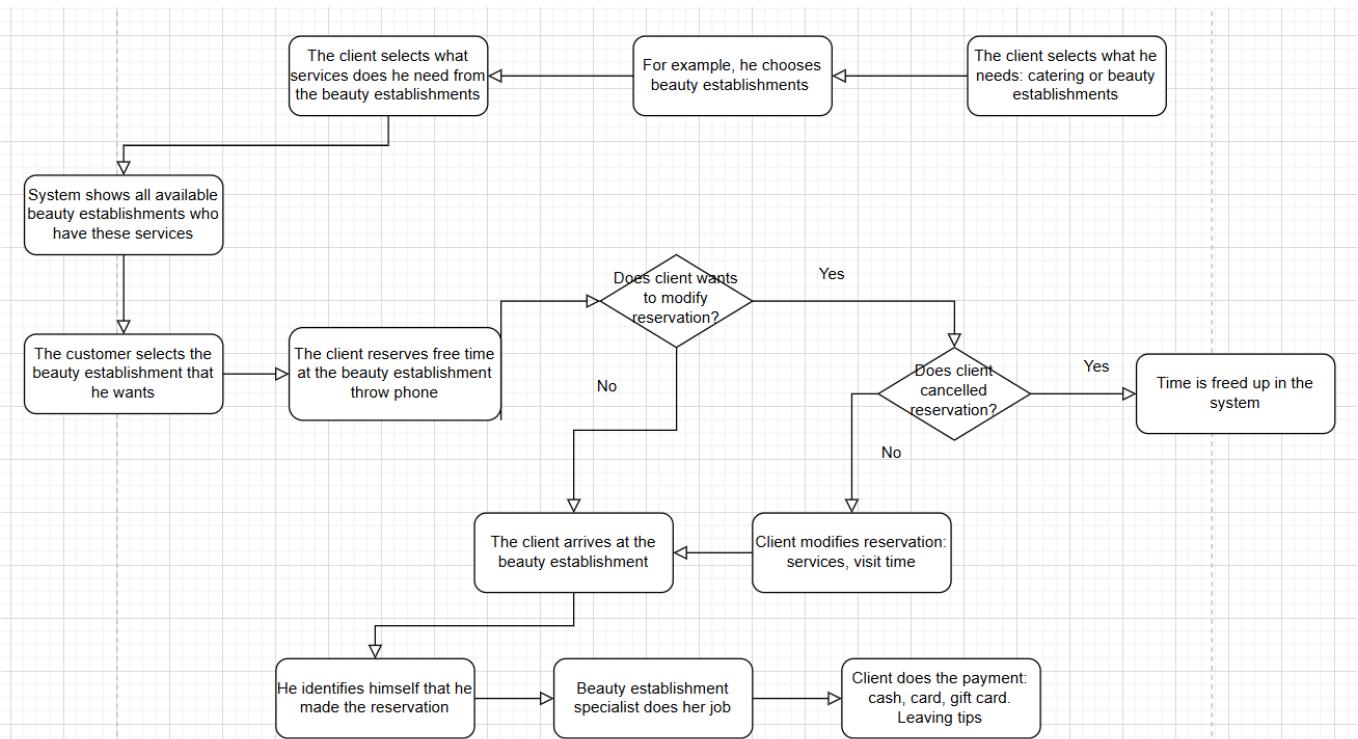

- Service (hair cutting, hair coloring, hairstyle, beard shaving)
- Business (multiple beauty establishments)
- Reservation
- Payment (cash, card, gift card, discount, tips)
- Receipt
- Discount
- Tax

Components:

- Reservation management (Service, Business, Reservation, Payment, Receipt, Discount, Tax)

Actions:

- Client reserves a service
- Client cancels the service
- Client modifies the service
- Client pays for the service

Wireframes

Employee/business management

Logged in as Owner

Business

Ipsum, TX 12345
Phone: (123) 456-7890
Email: info@example.com

[Edit Business](#)

Employees

Name	Role	Action
John Doe	Owner	
Jane Smith	Employee	 
Michael Brown	Employee	 

Employee/business management subpage from an owner's perspective. In this subpage, a business owner is logged in. He can view and edit the business information and manage employees. Clicking "**Edit Business**" will redirect him to a pop-up window, where he can modify company details such as name, address, phone, and email. Clicking "**Add Employee**" will redirect him to a pop-up window to create a new employee profile. The edit icon allows modifying an existing employee's details, while the delete icon removes the employee from the list. The owner isn't able to edit or remove himself.

Logged in as Admin

[Edit Business](#)

Employees

Name	Role	Action
John Doe	Owner	 
Jane Smith	Employee	 
Michael Brown	Employee	 

Employee/business management subpage from an admin's perspective. It has all the same features as in the previous example, with the only difference being that an admin can edit and delete the business owner.

Order management

Text inside boxes is either a button or field which value can be changed.

New order	Products	Closed orders	Refunded orders
Open orders			
Order #0125			
Order #0124			
Order #0123		Add new item	Delete order
Item Id	Product	Quantity	Variations
#001	Coffee	- <input type="button" value="1"/> + <input type="button" value="Edit"/>	# <input type="text" value="0010"/> <input type="button" value="Delete"/>
#002	Croissant	- <input type="button" value="2"/> + <input type="button" value="Edit"/>	# <input type="text" value="0000"/> <input type="button" value="Delete"/>
Order discount Id: # <input type="text" value="0007"/>			
Tip: <input type="text" value="10"/> % <input type="button" value="▼"/>		Proceed	
Order #0122			

Open orders subpage. Here one can create a new order, add new items to already open orders, completely delete orders. Items in an order can have various quantities, variations and discounts. Each item can also be deleted. A discount can be applied to the whole order and a tip can be added. If no more items are added to the order, one can proceed to payment. There can be several open orders at the same time. An open order can be expanded by pressing the corresponding button but only one order can be expanded. If one order is expanded and a button of another order is pressed, then the first order collapses and the second order expands.

Product Id	Name	
#0001	Coffee	Add
#0002	Croissant	Add
#0003	Tea	Add
#0004	Cake	Add
...	...	Add

Cancel

Add new item pop-up window. Accessed by pressing “Add new item” button in *Open orders* subpage. Here one can add an item from the list of products or close the window. After pressing any of the “Add” buttons, pop-up window automatically closes.

Variations pop-up window. Accessed by pressing “Edit” buttons near each item in an order. After all variations for particular item are selected, the selection is saved by pressing “Save” button. One can close the pop-up window with “Cancel” button if default selection was chosen.

Order sum:€

Tip:€

Discount: -€

Total:€

Payment Id	Amount	Payment	
#1	<input type="text" value="10.01"/>	<input type="button" value="Pay"/>	<input type="button" value="Delete"/>
#2	<input type="text" value="8.56"/>	<input type="button" value="Pay"/>	<input type="button" value="Delete"/>

Payment subpage. Accessed by pressing “Proceed” button in *Open orders* subpage. One can have multiple payments by pressing “Add split check” button. After pressing the button, a new line in the table appears. Then amounts of each payment can be adjusted, though all “Pay” buttons should be inactive until all amounts add up to the total amount spent. After paying one bill, other bills will lock. One will not be able to change the amount or delete a bill.

New order	Products	Closed orders	Refunded orders
Products			
Product Id	Name	Base price	VAT
#0001	Coffee	2.00	21%
#0002	Croissant	1.50	21%
#0003	Cake	3.30	21%
#0004	Wine	5.50	30%
...

Products subpage. Accessed by pressing the "Products" button at navigation bar at the top of the page. Here one can add new products, edit already existing products or delete them from the catalogue.

Product Id: #0005

Name:

Base price:

VAT:

Product pop-up window. Accessed by pressing either “Add new product” or “Edit” buttons in *Products* subpage. Name, base price and VAT can be entered.

New order	Products	Closed orders	Refunded orders
Closed orders			
Order Id	Total amount	Receipt	
#0021	12.34	<button>Get</button>	<button>Refund</button>
#0008	5.64	<button>Get</button>	<button>Refund</button>
...

Closed orders subpage. Accessed from the navigation bar. Here one can get a receipt or refund a closed order.

New order	Products	Closed orders	Refunded orders
Refunded orders			
Order Id	Total amount		
#0021			12.34
#0008			5.64
...			...

Refunded orders subpage. Accessed from the navigation bar. Here one can see all the refunded orders.

Reservation management

								<input type="button" value="Create"/>
			Year	Month				
Employee ID	Client name surname	Phone number	Service type	Start time	Finish time	Discount Nr.	Price €	
1	Mantas Mantaitis	+3701111111	Hair cut	10:00	10:30	D1234	20	Edit Delete
2	Petras Petraitis	+3701112222	Hair coloring	10:00	11:00		60	Edit Delete
2	Petras Petraitis	+3701222222	Hair cut	13:00	13:30		25	Edit Delete

Open reservation subpage, sorted by hours. In this subpage, an employee is logged in as **Employee 1**. He can edit and delete only his reservation. Clicking "Create" (to make a new reservation) will redirect him to the "**Create Reservation**" page. Clicking "Edit" (to edit a reservation) will redirect him to the "**Edit Reservation**" page. Clicking "Delete" (to delete a reservation) will remove the reservation. Clicking "Year" or "Month" will open the calendar display, allowing the employee to choose the desired year and month.

Create

Create reservation subpage. Reached from “**Open reservation**” subpage. Must enter *specialist’s name surname*, the client’s *first name, last name, phone number*, the *Service type*, as well as the *available visit date* — based on the selected *Service type*. Then it is optional to enter the *discount number* — based on the number and *Service type*, the *final price* is calculated. The reservation cannot be added until all fields are filled and displayed, except for the *discount number*.

Edit reservation

Edit reservation subpage. Reached from “**Open reservation**” subpage. It is possible to change the *specialist's name surname*, the client's *first name, last name, phone number*, and the *Service type*. It is also possible to change the *available visit date*. It is possible to adjust the *discount number*, and the *final price* will be recalculated accordingly. The edited reservation cannot be saved until all fields are filled and displayed, except for the *discount number*. It could be deleted.

Package diagrams

Package Relationships

Source Package	Depends On / Uses	Description
OrderManagement	PaymentProcessing, SystemUtilities	Uses payment, tax, and discount logic when closing orders
ReservationManagement	BusinessManagement, UserManagement	Uses business and employee data to schedule appointments
BusinessManagement	UserManagement	Businesses own employees and define services
UserManagement	SystemUtilities	For access control and authentication
PaymentProcessing	SystemUtilities	Uses tax and discount modules for price calculation
SystemUtilities	(independent)	Provides reusable tax, discount, and receipt features

Internal Package Structure

OrderManagement

- **Classes:** Order, OrderItem, Product, Receipt
- **Responsibilities:**
 - Create and modify orders
 - Handle discounts and taxes
 - Integrate with payment module
 - Generate receipts

ReservationManagement

- **Classes:** Reservation, Service, Schedule
- **Responsibilities:**
 - Manage customer bookings
 - Track service time and assigned employee
 - Support modification and cancellation

BusinessManagement

- **Classes:** Business, Location, ServiceCatalog
- **Responsibilities:**
 - Store business data
 - Define available services and pricing
 - Associate employees with businesses

UserManagement

- **Classes:** User, Role, Permission
- **Responsibilities:**
 - Authentication and authorization
 - Role-based access (Employee, Owner, SuperAdmin)
 - Manage user data

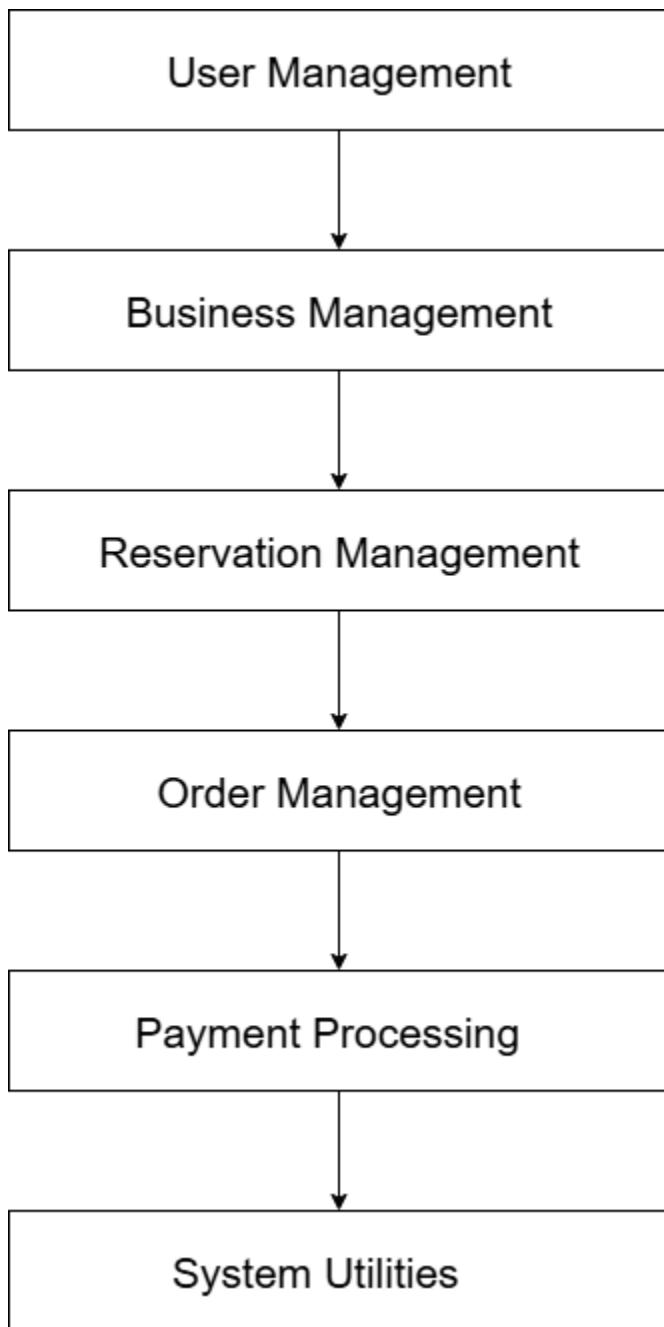

PaymentProcessing

- **Classes:** Payment, PaymentMethod, Transaction
- **Responsibilities:**
 - Handle cash, card, and gift card payments
 - Integrate with Stripe API
 - Support split payments and refunds

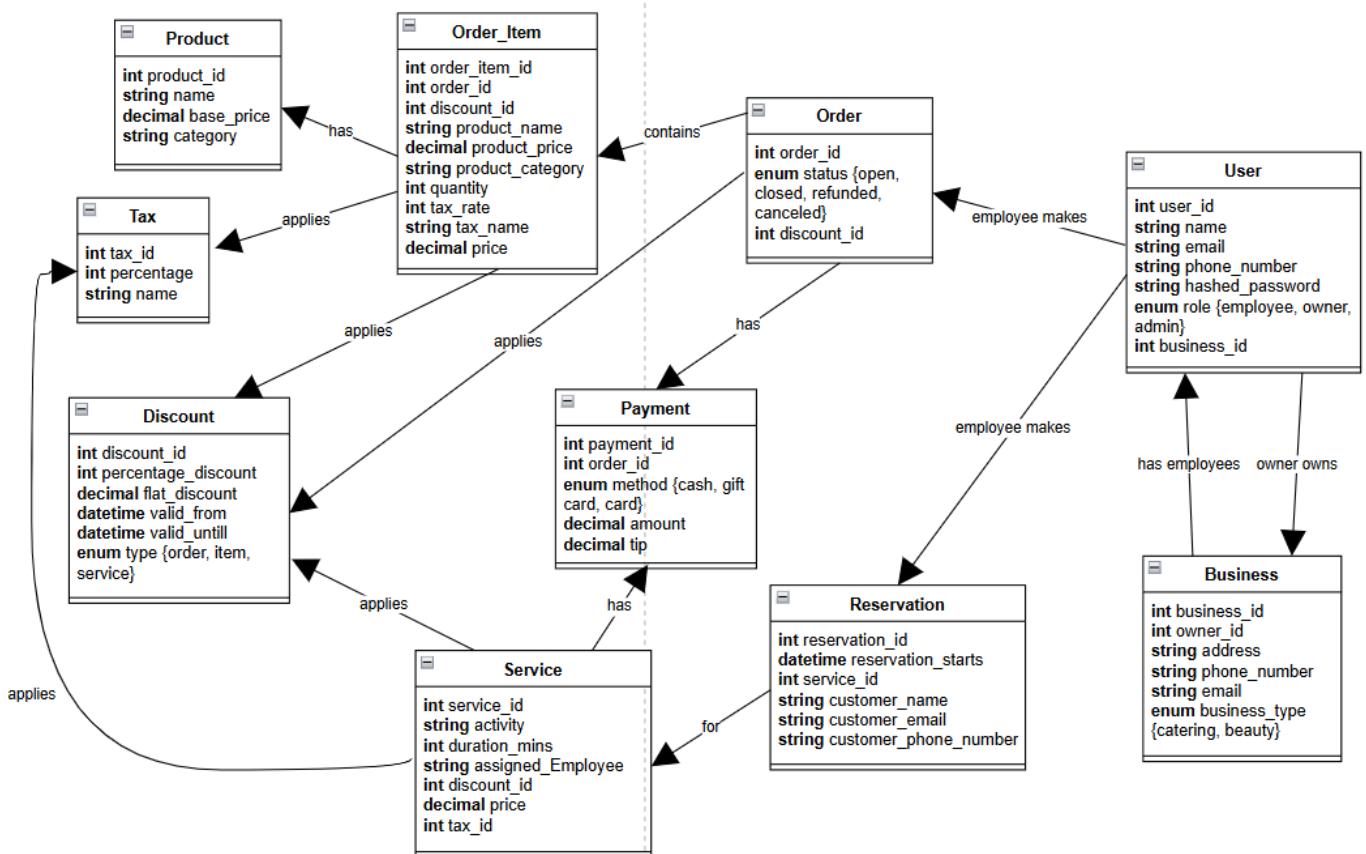

SystemUtilities

- **Classes:** Tax, Discount, ReceiptGenerator
- **Responsibilities:**
 - Apply VAT/tax logic
 - Manage discount types and validity
 - Generate final receipts

Dependency View

Data model

Product:

- Attributes:
 - `product_id` (*int*) — Unique identifier.
 - `name` (*string*) — Product name.
 - `base_price` (*decimal*) — Default price.
 - `category` (*string*) — Product category.
 - Relationships:
 - It is an essential component of `Order_Item`.
 - Tax and Discount can apply to it.

Order_Item:

- Attributes:
 - `order_item_id` (*int*) — Unique item ID.
 - `order_id` (*int*) — The ID of the order, it is a part of.
 - `discount_id` (*int*) — Discount applied.
 - `product_name` (*string*) — a copy (snapshot) from Product
 - `product_price` (*int*) — a copy (snapshot) from Product
 - `product_category` (*string*) — a copy (snapshot) from Product
 - `quantity` (*int*) — Number of units.
 - `tax_rate` (*int*) — a copy (snapshot) from Tax
 - `tax_name` (*string*) — a copy (snapshot) from Tax
 - `price` (*decimal*) — Price after discounts/taxes.
 - Relationships:
 - A component of an Order.
 - Contains information about a Product.
 - Tax and Discount can apply to it.

Order:

- Attributes:
 - `order_id` (`int`) — Unique order ID.
 - `status` (`enum`) — {open, closed, refunded, canceled}.
 - `discount_id` (`int`) — Discount applied.
 - `payment_id` (`int[]`) — Associated payments.

- Relationships:
 - It is made by an Employee (User).

Payment:

- Attributes:
 - payment_id (*int*) — Unique payment ID.
 - order_id (*int*) — The ID of an order or service, the payment is associated with.
 - method (*enum*) — {cash, gift card, card}.
 - amount (*decimal*) — Paid amount.
 - tip (*decimal*) — Optional tip.
- Relationships:
 - Used in all Order payments.
 - Used in all Service payments.

Discount:

- Attributes:
 - discount_id (*int*) — Unique ID.
 - percentage_discount (*int*) — % discount.
 - flat_discount (*decimal*) — Fixed discount amount.
 - valid_from, valid_until (*datetime*) — Validity period.
 - type (*enum*) — {order, item, service}.
- Relationships:
 - Applies to Order_Item, Service, and Order.

Tax:

- Attributes:
 - tax_id (*int*) — Unique ID.
 - percentage (*int*) — Tax rate.
 - name (*string*) - Name of the tax for receipt printing.
- Relationships:
 - Applies to Order, Service, and Order_Item.

Service:

- Attributes:
 - service_id (*int*) — Unique ID.
 - activity (*string*) — Service type.
 - duration_mins (*int*) — Duration.
 - assigned_employee (*string*) — Employee handling it.
 - discount_id, tax_id (*int*) — Related IDs.
 - price (*decimal*) — Cost.
- Relationships:
 - Has an applied Tax and can have a Discount.
 - Linked to Reservation.

Reservation:

- Attributes:
 - reservation_id (*int*) — Unique ID.
 - reservation_starts (*datetime*) — Time when reservation starts.
 - service_id (*int*) — Booked service.
 - customer_name, customer_email, customer_phone_number (*string*) — Client details.
- Relationships:
 - Linked to a specific Service.

User:

- Attributes:
 - user_id (*int*) — Unique ID.

- name, email, phone_number (*string*) — Personal info.
- hashed_password (*string*) — Encrypted password.
- role (*enum*) — {employee, owner, admin}.
- business_id (*int*) — only relevant for employees working for a business, is NULL for everybody else.
- Relationships:
 - Employees create Orders and Reservations
 - Employees work for a Business.
 - Owners own a business.

Business:

- Attributes:
 - business_id (*int*) — Unique ID.
 - owner_id (*int*) — Business owner.
 - address, phone_number, email (*string*) — Contact info.
 - business_type (*enum*) — {catering, beauty}.
- Relationships:
 - Owned by a User (owner).
